Cybersecurity from Assured Enterprises Now Available as Connecticut Bar Association Member Benefit

Vienna, Virginia (January 4, 2021) – Assured Enterprises (www.assured.enterprises) announced today that it has been granted a place as a member benefit for the Connecticut Bar Association. Following review by the Connecticut Bar Association’s Member Benefit program, Assured is among the companies chosen to offer special benefits and pricing in 2021 to Bar members.

Law firms have access to highly sensitive data as part of their businesses, and as such are an enticing target for cyber-attacks and ransomware. The ABA reports that, in 2019, more than 26% of survey respondents reported some sort of security breach, from hacking activity to stolen laptops. Data breaches at law firms are particularly damaging, both because lawyers rely on their reputations, which a breach can damage, and also because of the confidential nature of the data they hold, which can be leveraged against them and their clients.

As a benefit for Connecticut Bar Association members, Assured Enterprises is now offering special pricing for tailored and comprehensive pre-breach, monitoring, and post-breach products and services. This includes Assured’s patented deep software scanner, [AssuredScanDKV®](#), which identifies vulnerabilities in both custom and commercial applications.

Assured’s Chairman and CEO, Stephen Soble, understands the special requirements of lawyers when it comes to data privacy and system security. “Every business needs to be paying attention to their cybersecurity posture and threat surface,” said Mr. Soble. “As a former lawyer with my own firm, the needs of legal professionals are especially clear to me and our team. Risk identification, measurement, management and remediation along with compliance are a natural extension for a lawyer’s obligations to our clients. That’s why we’re so pleased to be able to offer comprehensive and affordable cybersecurity solutions and products to the Connecticut Bar members through this program.”

Connecticut Bar Association members who wish to discuss their cybersecurity needs with Assured should visit the member benefits page of the association's website to get more information.

Assured Enterprises, Inc. a leading provider of cybersecurity products, solutions, and services, including comprehensive monitored support. Assured offers a variety of cyber risk assessments and solutions, including the most comprehensive risk assessment system on the market today, [TripleHelix](#)[®]. Assured also offers [AssuredScanDKV](#)[®], the only deep software scanner available that can both Detect Known Vulnerabilities and direct remediation activities without the need for source code and without access to a client's data.
